ABDUL JAWAD AZIZI

FULL-STACK SOFTWARE ENGINEER

Jakarta, Indonesia | 0823 1675 6727 | jawadabdul307@gmail.com
github.com/Abdulzizi | linkedin.com/in/abduljawadazizi07

PROFESSIONAL SUMMARY

Full-stack engineer who ships whole products, from UI to database to deployment. Owns 3 backend services and the UI of a nationwide workforce management platform at Telkom Akses, and is part of the team rebuilding a petition platform with 19M users from scratch at Freecause. Broad across the stack, and often stronger than a specialist in any single layer.

EXPERIENCE

Full Stack Developer (Contract) | PT Telkom Akses Jul 2025 - Present

- Own 3 of 4 backend services (scheduling, work order, assurance) and the UI of WFM, Telkom Akses's nationwide workforce management platform used by field technicians and internal staff across Indonesia.
- Built the premium fiber subscription feature for middle and upper-tier customers: new monthly recurring revenue for the business, with faster installation as the premium benefit.
- Fix production bugs and improve performance, security and features across a microservices architecture with an API gateway.

Technologies: Laravel, Python, PostgreSQL, REST APIs, Microservices, API Gateway, Git

Freelance Full Stack Developer | Freecause Jan 2026 - Present

- Part of the team rebuilding Freecause from scratch, replacing a 2000s-era petition site with 19M users, 200K petitions and 15M signatures; own product work end to end.
- Architected an edge caching layer (Cloudflare Cache Rules + Laravel stateless-listing middleware) that serves anonymous petition listings from the edge, cutting origin DB/CPU load and page latency.
- Redesigned cache invalidation into a granular, versioned system, eliminating stale-content bugs across listings, home, and sitemap.
- Replaced a custom HTML sanitizer with symfony/html-sanitizer, backed by adversarial XSS tests, hardening user-generated content.
- Built tag-triggered CI/CD with Deployer 8 and GitHub Actions (test and security gates, smoke tests, auto-rollback), replacing manual deploys with a safe recovery path.

Technologies: Laravel, PHP, Cloudflare, GitHub Actions, Deployer

Web Development Intern | Venturo Nov 2024 - Apr 2025

- Developed a Vue.js and Laravel admin dashboard that reduced manual administration tasks by 30%.
- Built REST APIs, improved database queries, reviewed code, and resolved application defects.
- Collaborated within a five-member team using Git and Agile practices.

Technologies: Laravel, Vue.js, PostgreSQL, MySQL, MongoDB, Git

EDUCATION

Bachelor of Computer Science, Data Science | BINUS University Aug 2026 - Present

Software Engineering | SMK Telkom Malang Jul 2022 - Jul 2025

TECHNICAL SKILLS

Languages: PHP, JavaScript, TypeScript, Python, Go

Frontend: Vue.js, Next.js, React

Backend: Laravel, Node.js, Express, REST APIs, Microservices

Databases: PostgreSQL, MySQL, MongoDB

Cloud: Cloudflare (CDN, Cache Rules)

DevOps & Automation: Docker, Jenkins, GitHub Actions, Deployer 8, CI/CD pipelines

AI-Assisted Dev: Claude Code, OpenAI Codex, OpenCode, Claude

Tools: Git, Postman, VS Code
